

ABSTRACT OF THE DISCLOSURE:

The invention relates to a friction body with a steel girder (1) and with a friction lining (2) made of carbon fibers which is glued onto the steel girder (1). In order to provide simple constructional conditions it is proposed that a porous intermediate layer (3) is provided between the friction lining (2) and the steel girder (1), which porous intermediate layer is joined via one adhesive layer (4, 5) each with the friction lining (2) on the one hand and with the steel girder (1) on the other hand.
